Auditor's report

Type of opinion: unqualified
- [key audit matters] “Principais Assuntos de Auditoria (PAA) são aqueles que, em nosso julgamento profissional, foram os mais significativos em nossa auditoria do exercício corrente. Esses assuntos foram tratados no contexto de nossa auditoria das demonstrações financeiras individuais e consolidadas como um todo e na formação de nossa opinião sobre essas demonstrações financeiras individuais e consolidadas e, portanto, não expressamos uma opinião separada sobre esses assuntos. Nossa auditoria para o exercício findo em 31 de dezembro de 2018 foi planejada e executada considerando que as operações da Companhia e suas controladas não apresentaram modificações significativas em relação ao exercício anterior, findo em 31 de dezembro de 2017. Nesse contexto, os Principais Assuntos de Auditoria, bem como nossa abordagem de auditoria, mantiveram-se substancialmente alinhados àqueles do exercício anterior.” (cut at the end of a sentence, original excerpt in Portuguese)
- Excerpt omitted; see the auditor's report in the document

Reference Form

The Reference Form for this fiscal year was not available on the date. It is the only version available in the open data; earlier versions are not there.

Limits of this section:
- In real documents, about 22% of the excerpts come out omitted by the name detector, including names of companies outside the registry.
- In tables, header lines (years, column titles) may come out as excerpts; the held-out cases had no tables with multi-line headers.

How the engine was tested

In study 1, engine v1 detected 7 of 13 detectable cases, with 108.3 false alarms per detected case over the whole period and an alert rate of 49.9% among evaluated non-financial company-years (docs/summary.md).

Limits
- No alert is not a clean bill of health. In Dechow, Sloan and Sweeney (1995), the most powerful accruals model rejected 'no manipulation' for only 28.1% of 32 companies sanctioned by the SEC

(Table 7, p. 32).
- In study 1, 49.9% of evaluated non-financial company-years (48.3% including financial companies) were in alert, and the number of detections did not beat chance in a descriptive test done after the result: 7 detections in 13 detectable cases, against 7.37 expected by chance without assuming independent years (8.56 assuming independent years).
- Risk models use numbers that may be manipulated (Pereira and Martins 2015, p. 29). That is why the three families are not added up.

Limitations

- Context indicators (Altman Z'' and Piotroski F) were not validated in Brazil by this project and do not trigger alerts

Evidence in the JSON: 2 DFP lines, each with document, version, filing date, account and location.
