The Resolution has been in force since 2021-04-01 (art. 41); before

that, the equivalent rule was in arts. 31 and 31-A of CVM Instruction No. 308/1999, revoked by the Resolution (art. 40, I). A change of auditor is a fact, not an alert.

Auditor's report
Type of opinion: qualified
- Excerpt omitted; see the auditor's report in the document
- [key audit matters] “Principais assuntos de auditoria Principais assuntos de auditoria são aqueles que, em nosso julgamento profissional, foram os mais significativos em nossa auditoria do exercício corrente. Esses assuntos foram tratados no contexto de nossa auditoria das demonstrações financeiras como um todo e na formação de nossa opinião sobre essas demonstrações financeiras e, portanto, não expressamos uma opinião separada sobre esses assuntos. Além dos assuntos descritos na seção “Base para opinião com ressalva” e “Incerteza relacionada à continuidade operacional”, não existem outros principais assuntos de auditoria a comunicar em nosso relatório.” (original excerpt in Portuguese)
- [other matters] “Outros assuntos Demonstração do valor adicionado As demonstrações do valor adicionado (DVA) referentes ao exercício findo em 31 de dezembro de 2017, elaboradas sob a responsabilidade da administração da Companhia, e apresentadas como informação suplementar para fins de IFRS, foram submetidas a procedimentos de auditoria executados em conjunto com a auditoria das demonstrações financeiras da Companhia. Reference Form
Form of 2018, version 2, filed on 2018-06-19.
The Reference Form lists no related-party transactions in the table. It is the only version available in the open data; earlier versions are not there.

Limits of this section:
- In real documents, about 22% of the excerpts come out omitted by the name detector, including names of companies outside the registry.
- In tables, a header line (years, column titles) may still come out as an excerpt: in the reader's measurement, 1 of 19 header texts of the held-out cases came out as excerpts.

How the engine was tested

In study 1, engine v1 detected 7 of 13 detectable cases, with 108.3 false alarms per detected

case over the whole period and an alert rate of 49.9% among evaluated non-financial company-years (docs/summary.md).

Limits

- No alert is not a clean bill of health. In Dechow, Sloan and Sweeney (1995), the most powerful accruals model rejected 'no manipulation' for only 28.1% of 32 companies sanctioned by the SEC (Table 7, p. 32).
- In study 1, 49.9% of evaluated non-financial company-years (48.3% including financial companies) were in alert, and the number of detections did not beat chance in a descriptive test done after the result: 7 detections in 13 detectable cases, against 7.37 expected by chance without assuming independent years (8.56 assuming independent years).
- Risk models use numbers that may be manipulated (Pereira and Martins 2015, p. 29). That is why the three families are not added up.

Limitations

- Context indicators (Altman Z'' and Piotroski F) were not validated in Brazil by this project and do not trigger alerts

Evidence in the JSON: 36 DFP lines, each with document, version, filing date, account and location.
