Auditor's report
Type of opinion: unqualified
- [emphasis of matter] “Ênfase Conforme descrito na nota explicativa 3, as demonstrações contábeis individuais foram elaboradas de acordo com as práticas contábeis adotadas no Brasil. No caso da Forjas Taurus S.A. essas práticas diferem da IFRS, aplicável às demonstrações contábeis separadas, somente no que se refere à avaliação dos investimentos em controladas, coligadas e controladas em conjunto pelo método de equivalência patrimonial, enquanto que para fins de IFRS seria custo ou valor justo. Nossa opinião não está ressalvada em função desse assunto.” (original excerpt in Portuguese)
- Excerpt omitted; see the auditor's report in the document

Reference Form
The Reference Form for this fiscal year was not available on the date. It is the only version available in the open data; earlier versions are not there.

Limits of this section:
- In real documents, about 22% of the excerpts come out omitted by the name detector, including names of companies outside the registry.
- In tables, a header line (years, column titles) may still come out as an excerpt: in the reader's measurement, 1 of 19 header texts of the held-out cases came out as excerpts.

How the engine was tested

In study 1, engine v1 detected 7 of 13 detectable cases, with 108.3 false alarms per detected case over the whole period and an alert rate of 49.9% among evaluated non-financial company-years (docs/summary.md).

Limits

- No alert is not a clean bill of health. In Dechow, Sloan and Sweeney (1995), the most powerful accruals model rejected 'no manipulation' for only 28.1% of 32 companies sanctioned by the SEC (Table 7, p. 32).
- In study 1, 49.9% of evaluated non-financial company-years (48.3% including financial companies) were in alert, and the number of detections did not beat chance in a descriptive test done after the result: 7 detections in 13 detectable cases, against 7.37 expected by chance without assuming independent years (8.56 assuming independent years).
- Risk models use numbers that may be manipulated (Pereira and Martins 2015, p. 29). That is why the three families are not added up.

Limitations

- Context indicators (Altman Z'' and Piotroski F) were not validated in Brazil by this project and do not trigger alerts
