Possible manipulation (engine v1, study 1)

Financial risk (context only)

Altman Z'' (financial risk, context only)
  Value: −547.740 (index)
  Components: X1 = −13.512; X2 = −63.733; X3 = −37.246; X4 = −0.984 (indices)
  Percentile in sector and year: 11 (n = 14)
  The company's own history: fewer than 5 previous fiscal years with a value
  - No cut-off zone: the available source does not define zones for Z''
  - Coefficients estimated outside Brazil; bankruptcy models lose validity over time (Pereira and Martins 2015, p. 25)

Financial quality (context only)

Piotroski F (financial quality, context only)
  Value: F = 3/9 (7 computable)
  Signals:
    - Return on assets (ROA): 0
    - Operating cash flow on assets (CFO): 0
    - Change in ROA (ΔROA): 1
    - Cash above earnings (ACCRUAL): 1
    - Change in leverage (ΔLEVER): 0
    - Change in current ratio (ΔLIQUID): 1
    - No equity issuance (EQ_OFFER): —
    - Change in gross margin (ΔMARGIN): —
    - Change in asset turnover (ΔTURN): 0
  - No equity issuance (EQ_OFFER), from the cash flow statement: 6.03 lines of the frozen "emissões" pattern (reconnaissance, part 4.2), only those about shares or capital, as the article defines it ("did not issue common equity", p. 9); adaptation: preferred shares also count, because in Brazil they are equity, and the line is identified by text in the cash flow statement
  - No long-term debt in either year: the change in leverage (ΔLEVER) is zero and the signal is 0 (project choice; the article only defines fell = 1, rose = 0, p. 8)

Changes

Restatement through the following year's comparative: no difference above the tolerance, or the next year's DFP did not exist yet on the date.

What was known on the date

- FCA 2011, v1: 2011-01-24
- DFP 2010, v1: 2011-03-31
- FCA 2011, v2: 2011-05-09
- FCA 2011, v3: 2011-08-16
- DFP 2011, v1: 2012-03-31
- DFP 2012, v1: 2013-02-21
- DFP 2012, v2: 2013-02-22

DFP and FCA filed with the CVM by the reference date; ITR and material facts come in later phases.

Auditor's report and auditor (factual section; no alert)

Auditor's report: Sem Ressalva (unqualified).
no opinion excerpt was found in the text
Auditor in the 2010 FCA: Deloitte Touche Tohmatsu Auditores Independentes.
Auditor in the 2011 FCA: Deloitte Touche Tohmatsu Auditores Independentes.
Auditor in the 2012 FCA: KPMG Auditores Independentes.
Auditor changes (one line per change, canonical name by the firm's CVM code):

- 2012: Deloitte Touche Tohmatsu Auditores Independentes -> KPMG Auditores Independentes. The outgoing firm audited 3 consecutive fiscal years (2009 to 2011), by the start and end dates in the FCA.

Auditor rotation: under CVM Resolution No. 23/2021, art. 31, the same independent auditor may not serve the same client for more than five consecutive fiscal years, with a minimum interval of three fiscal years before being hired again; under art. 31-A, the term is up to ten consecutive fiscal years when the company has a statutory audit committee in permanent operation and the auditor is a firm. The Resolution has been in force since 2021-04-01 (art. 41); before that, the equivalent rule was in arts. 31 and 31-A of CVM Instruction No. 308/1999, revoked by the Resolution (art. 40, I). A change of auditor is a fact, not an alert.

How the engine was tested

In study 1, engine v1 detected 7 of 13 detectable cases, with 108.3 false alarms per detected case over the whole period and an alert rate of 49.9% among evaluated non-financial company-years (docs/summary.md).

Limits

- No alert is not a clean bill of health. In Dechow, Sloan and Sweeney (1995), the most powerful accruals model rejected 'no manipulation' for only 28.1% of 32 companies sanctioned by the SEC (Table 7, p. 32).
- In study 1, 49.9% of evaluated non-financial company-years (48.3% including financial companies) were in alert, and the number of detections did not beat chance in a descriptive test done after the result: 7 detections in 13 detectable cases, against 7.37 expected by chance without assuming independent years (8.56 assuming independent years).
- Risk models use numbers that may be manipulated (Pereira and Martins 2015, p. 29). That is why the three families are not added up.

Limitations

- Context indicators (Altman Z'' and Piotroski F) were not validated in Brazil by this project and do not trigger alerts

Evidence in the JSON: 36 DFP lines, each with document, version, filing date, account and location.

Engine

motor v1 (estudo 1), branch estudo-1-final, commit 8c9a823; chiocca.v2 (produto, fases B a E).
